

FILM FREE PROJECTION VERSION 3.4

Version 3.4 has had fewer user visible changes; the big change is “under the hood” as the version of .NET has been upgraded from 3.5 to 4.5 – in practise, this makes installing FFP on Windows 10 easier, but it does mean that earlier versions of Windows (XP and Vista) are no longer supported and it isn’t possible to install FFP 3.4 on those operating systems.

Apart from a few minor bug fixes, the user visible changes are:

16:10 RATIO TEST IMAGE NOW BUILT IN

Although FFP automatically adjusts itself for different monitor sizes, the built-in test images have previously only supported 4:3 and 16:9 monitors. A 16:10 monitor ratio is now supported.

REVISED HELP

The help system has been revised to remove references to Windows XP and Vista and adding installation instructions for Windows 10.
